

Trial on Pembroke for suspected Transfusion Reaction

Receive call from Pembroke Staff of a suspected transfusion reaction

Enter patient details into the Blood Transfusion Handover book
Patient's Full Name,
Hospital No,
DOB,
Gender
Determine the severity of the transfusion- Mild Moderate or Severe
Take Name of person providing the information for TP to contact later

Request Samples
(Inform Pembroke of Tquest group request for suspected transfusion reaction)

If moderate (Patient remains unstable after 15 minutes or severe reaction suspected)
Request the implicated unit complete with giving set attached to be returned to the Blood Transfusion Laboratory immediately using sterile spigot

Samples should be received **with** the completed Guidance for the recognition and management of a suspected Acute Transfusion Reaction form from Pembroke(Part 1) . Investigations are determined by the severity of the suspected transfusion reaction

Inform the Transfusion Nurse Practitioner (TP)of the suspected transfusion reaction- completed forms into the TP's Office for follow up / investigation
